

Add All

Yup!! The problem name reflects your task; just add a set of numbers. But you may feel yourselves condescended, to write a C/C++ program just to add a set of numbers. Such a problem will simply question your erudition. So, lets add some flavor of ingenuity to it.

Addition operation requires cost now, and the cost is the summation of those two to be added. So, to add 1 and 10, you need a cost of 11. If you want to add 1, 2 and 3. There are several ways.

1 + 2 = 3, cost = 3	1 + 3 = 4, cost = 4	2 + 3 = 5, cost = 5
3 + 3 = 6, cost = 6	2 + 4 = 6, cost = 6	1 + 5 = 6, cost = 6
Total = 9	Total = 10	Total = 11

I hope you have understood already your mission, to add a set of integers so that the cost is minimal.

Input Format

Each test case will start with a positive number, $N(2 \leq N \leq 5000)$ followed by NN positive integers (all are less than 100000100000). Input is terminated by a case where the value of NN is zero. This case should not be processed.

Output Format

For each case print the minimum total cost of addition in a single line.

Sample test
